

Sharvin Neve

Full-Stack & AI Systems Engineer | Python, FastAPI, React/TypeScript & LLM Agents
Mumbai, India | sharvinneve67@gmail.com | 075065 74983 | sharvinneve | Guts1005

Education

NMIMS MPSTME, Mumbai, Integrated B.Tech + MBA Tech in Computer Engineering 2023 – 2028
• CGPA: 3.4/4.0 | Coursework: Database Management Systems (SQL), Operating Systems, Distributed Systems, Systems Programming

Technical Skills

Backend & APIs: Python, FastAPI, RESTful APIs, WebSockets, PostgreSQL, pgvector, SQL, Asynchronous I/O (asyncio)
Frontend & UI: React, TypeScript, JavaScript, HTML5/CSS3, Tailwind CSS, Component Architecture, Responsive Layouts
AI & Agents: LLM Orchestration, Function Calling / Tool Calling, RAG Pipelines, Prompt Engineering, Claude API, PyTorch
Data & Systems: Distributed Telemetry Ingestion, POSIX Daemons, Linux/GCP Deployment, Docker, Git/GitHub, CI/CD Automation

Experience

Systems & Telematics Software Intern, Aspire Consultancy Services – India May 2026 – July 2026
• Engineered an asynchronous, offline-first telemetry ingestion pipeline across 6 distributed nodes, processing 14,750+ events (18GB payload) with 0% data drop.
• Built robust reconnection synchronization protocols with ring-buffered serialization, reducing system failover downtime by 60%.
• Integrated real-time streaming services with WebRTC and REST endpoints, enabling sub-300ms low-latency monitoring and remote diagnostic telemetry.

Embedded Software Intern, Entice Engineering – India Aug 2025 – Dec 2025
• Developed sensor communication routines and real-time protocol parsers in C/Python, maintaining sub-5ms packet acquisition latency.
• Designed structured logging and telemetry parsing schemas adopted across multi-sensor diagnostic hardware.

Projects

ChurnIQ — Predictive Analytics & Machine Learning Platform
• Built full-stack predictive ML web application using Python and scikit-learn, achieving 84.93% ROC-AUC across customer feature matrices.
• Implemented end-to-end data pipeline including SQL-based feature extraction, SMOTE balancing, and real-time inference API endpoints.

Multimodal Video Ingestion & Intelligent Analysis Pipeline
• Engineered asynchronous video ingestion engine with OpenCV and FFmpeg, processing high-resolution video streams for AI inference.
• Integrated Claude/Gemini multimodal APIs with structured tool-calling schemas to extract situational alerts from video telemetry in real time.

Open Source Contributions

Open Source Systems & Infrastructure (GitHub: Guts1005)
• [sgl-project/sglang \(PR #38228\)](#): Implemented Prometheus avg_request_queue_latency metric across high-throughput distributed LLM inference queues.
• [gmail-oauth-mailer](#): Diagnosed and resolved socket timeout race conditions in headless Jenkins CI/CD automation pipeline.

Certifications and Achievements

• Smart India Hackathon — National Finalist (Hardware & Software Track)
• AWS Cloud Quest: Cloud Practitioner — AWS Training Badge
• NPTEL Elite Certificate — Intelligent Systems Design, IIT Kanpur
